Our 17 year history assures best practice in privacy, security and the ethical use of data

We all have a responsibility to use data for good

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantum has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

Quantum believes in using data for progress, with great care and responsibility. As such please respect the confidence nature of this document.

Executive summary

01

Task 1- Customer Purchasing Behaviour

Analysis of chip purchasing behaviour shows that **young singles/couples and older families** are the key drivers of sales within the category. These customer groups purchase chips more frequently and generate the highest revenue. Medium sized pack options (150g–175g) are the most popular products across most segments.

02

Task 2 - Trial Store Performance

Trial stores **77, 86 and 88** were compared against similar control stores using sales and customer metrics. The trial stores demonstrated **stronger sales growth during the trial period**, suggesting the new store layout positively influenced chip purchasing behaviour.

01

Category

The chip category is driven by frequent shoppers, particularly **young singles/couples and family households**.

These customers purchase chips regularly as part of grocery shopping.

Sales are strongest for **mid-sized packs (150g–175g)** which appear to best match customer consumption preferences.

Customer purchasing behaviour varies across affluence segments.

Mainstream and premium customers generate the highest sales value and tend to purchase larger pack sizes and well-known brands.

Budget customers still contribute to category sales but typically choose **smaller or lower priced** options.

The largest proportion of chip customers belong to **young singles/couples and older families**.

Across these groups, **mainstream shoppers represent the largest share**, followed by premium customers.

Understanding this distribution helps target marketing and promotional strategies more effectively.

02

Trial store performance

Trial stores **77, 86 and 88** were compared against control stores with similar historical sales patterns.

Metrics used for comparison included:

- total sales revenue
- number of customers
- transactions per customer

This method helps isolate the impact of the trial store layout.

Sales performance during the trial period was higher in the trial stores compared with their control stores.

This uplift suggests the new store layout improved product visibility and encouraged additional chip purchases.

The trial results indicate the layout change was **successful** and could be expanded to additional stores.
